

Paint Editor Extension for Unity

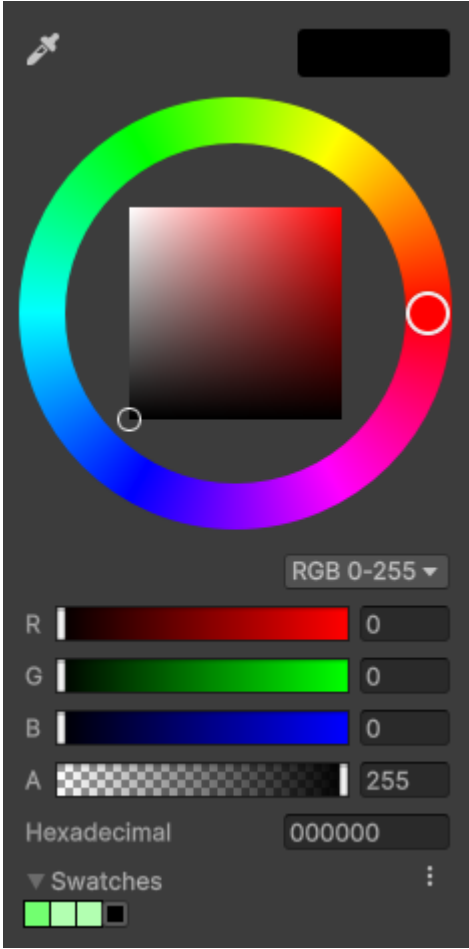

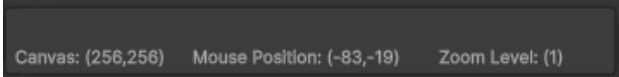

Paint Editor is an extension for painting and editing textures inside Unity. It provides different tools to paint, select, use layers, and more.

Workspace

Editor element	Description	Screenshot
Canvas	The area where you paint and edit textures.	

Editor element	Description	Screenshot
Toolbox	The window where you select the different tools.	
Main Menu	The top bar where some functionalities are displayed. The two available tabs are: File and Edit.	
Layers	The window where you can add, remove, hide, rename and reorder layers. You can also select blending modes for layers.	

Editor element	Description	Screenshot
Color	When clicking on the color field in the Layers' window, the Unity's color wheel pops up.	
Info	Some information related to the canvas is displayed at the bottom of the window.	

Main Menu

Menu function	Description
New image	Create a new canvas with any width and height.
Save image	Save and encode current canvas image into '.png' file at selected path.
Load image	Load any image file at selected path.
Command History (Undo/Redo)	Use the Edit Menu to restore and redo actions. Shortcut: 'ctrl'+ 'z'/'ctrl'+ 'shift'+ 'z'.

Tools

Tool	Description
Brush	Paint and adjust its size. There are two brush types: Box and Rect.
Eraser	Erase pixels from the canvas, similar to the brush tool.
Bucket	Click in a closed area to paint it.
Eyedropper	Use Unity's eyedropper to select any color in the canvas (any color at screen really).
Navigation	You can use the navigation tool to move the canvas in the window space. Shortcut: Hold 'alt' + click.
Zoom	You can zoom the canvas in or out. Shortcut: Hold 'ctrl' + click or use the scroll wheel.
Selection	Use the selection tool to take a section from a layer in the canvas and edit it. You can move, rotate and scale up and down the selected area. Also, the selection can be painted, erased and filled inside.

Layers

Layer function	Description
Add layers	Add new layer by clicking the + symbol.
Select layers	Select layer to paint in it.
Reorder layers	Drag a layer to reorder them.
Rename layers	Change the layer's name in the text field.
Hide layers	Click the eye icon next to the layer to hide/show the layer.
Remove layers	Remove selected layer by clicking the - symbol.
Select blending mode	Click on the layer tab to display and select any blend mode for the layer.
